

Suzanne is a Project Manager with the Community Engagement practice. Suzanne most recently was a Project Manager with the Human Environments Analysis Laboratory (HEAL). The HEAL is an interdisciplinary research lab whose focus is understanding how the built and natural environment affect people's healthy behaviours. The research projects she was involved with allowed her to develop a number of relationships with community partners and civilians, which is where her expertise in effective community engagement was established. Suzanne has an undergraduate degree from Queen's University in Life Sciences. Her passion for geography led her to pursue a MSc in Urban Health Geography from Western University. Suzanne has great professional pride in being a part of helping Toronto and the GTA continue to develop great places and spaces. As a key member of Bousfields' Community Engagement Practice, Suzanne is responsible for supporting and creating stakeholder engagement plans and public consultation plans, provides communication support, drafts communication materials, and also helps facilitate community consultations for projects across the GTA.

SUZANNE TILLMANN

MSc., BScH.

**PROJECT MANAGER
COMMUNITY ENGAGEMENT**
